

I. Project Title

- **Flashcard Buddy**

II. Problem statement

- Active Recall is a very good study method for students, especially for the Scholars of Pisay. However, most apps that provide flashcard-like help are either paid, or have a limited amount of lives. This program aims to give that flashcard help while being simple, easy to use, free, and unlimited.

III. Project Objectives

- My project must run without any errors or bugs.
- My project must be able to help my fellow scholars in their studies.
- My project must be able to create as many flashcards as needed by the user, and to be able to store them.

IV. Planned Features

- The user can Add flashcards, Quiz themselves, and Delete flashcards

V. Planned Inputs and Outputs

- Starting screen:

Hello!

1. Add flashcards
2. Delete flashcards
3. Quiz flashcards
4. Exit

Input the number of your option: (input)

- Adding flashcards:

Input your question: (input)

Input your answer: (input)

Would you like to add more flashcards? (yes/no): (input)

- Deleting flashcards:

1. "Example question, example answer"
2. "Hello, hi"

Input the number of the flashcard you'd like to delete: (input)

Computer Science 2
Quarter 1 First Project Proposal

- Quiz flashcards:

“Example question”
What is the answer? : (input)

(if correct): Correct!

(if wrong): Incorrect! The correct answer is “example answer”

VI. Logic Plan (pseudocode)

START

flashcards = []

FUNCTION clear_screen()

clear the screen

END FUNCTION

FUNCTION add_flashcards(flashcards):

WHILE true:

question = INPUT “input your question:”

answer = INPUT “input the answer:”

RETURN (question,answer)

CALL clear_screen()

add: INPUT “would you like to add more flashcards? (yes/no):”

IF add == “no”

END FUNCTION

FUNCTION delete_flashcards(flashcards):

IF flashcards == 0 THEN:

OUTPUT “No flashcards to delete”

RETURN

END IF

FOR EACH question, answer in flashcards:

OUTPUT (enumeration, question, answer)

END FOR

del = INPUT “Input the number of the flashcard you’d like to delete:”

IF del is a number THEN:
